

Neha Bisht

AI & DATA SCIENCE STUDENT | PYTHON DEVELOPER | COMPUTER VISION ENTHUSIAST

Address: Almora, Uttarakhand | Contact No: +91 9068367121 | Email: thenehabisht13@gmail.com | [LinkedIn](#)

Summary

BCA (AI & Data Science) student with hands-on experience in **Python, SQL, Machine Learning**, and **Computer Vision**, gained through applied academic projects. Comfortable working across the stack — from data handling and **API integration** to building functional, user-facing **Python** applications — with a growing focus on backend development. Quick learner with strong problem-solving fundamentals in **Data Structures & Algorithms**, seeking an internship or entry-level role in **Software Development / AI-ML** to contribute to real engineering teams.

Technical skills

Languages: Python, SQL, HTML, CSS, JavaScript (basics)

AI / ML & Computer Vision: Machine Learning fundamentals, Computer Vision, Face Recognition, Conversational AI (Gemini API), Speech Recognition, NLP basics

Core CS: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networking

Libraries & APIs: OpenCV, face_recognition, REST API Integration, OpenWeather API

Tools & Platforms: Git, GitHub, VS Code, MySQL Workbench, Postman

Projects

Jarvis AI Assistant

Python · Gemini AI · OpenWeather API · Speech Recognition

- Designed a modular voice-assistant pipeline (listen → main → commands) that captures speech input in real time and routes parsed commands to dedicated handler modules, demonstrating clean separation of concerns in a **Python** application.
- Integrated the **Gemini AI API** to power natural-language conversational responses and the **OpenWeather API** for live weather queries, combining **generative AI** with **real-time** third-party data.
- Built independent handler modules for system actions, AI responses, and weather queries, improving code organization and making the assistant easy to extend with new skills/commands.
- Implemented text-to-speech output to close the voice-in → voice-out loop, delivering a hands-free conversational experience end to end.

Face Recognition Attendance System

Python · OpenCV · face_recognition · Computer Vision

- Built an automated, **real-time** attendance system that detects and recognizes registered faces via live **webcam** feed, replacing manual roll-call with a computer-vision-driven workflow.
- Applied the **face_recognition** library on top of **OpenCV** to encode and match faces against a stored dataset, focusing on accurate **real-time** detection and recognition performance.
- Structured the project for easy dataset updates (adding/removing registered faces), making the system practical to maintain and extend.

Education

Bachelor of Computer Applications (BCA) — AI & Data Science

2024 – 2027 (Expected)

Graphic Era Hill University, Bhimtal, Uttarakhand

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networking, Machine Learning Fundamentals

Senior Secondary (XII)

2024

Jawahar Navodaya Vidyalaya, Ranikhet, Uttarakhand

Certifications

- Cisco — Python Essentials 1
- HackerRank — SQL (Basic)
- HackerRank — SQL (Intermediate)
- NPTEL — Enhancing Soft Skills and Personality

Hobbies & languages

Hobbies: Sketching & drawing, dancing, basketball

Languages: Hindi, English, Punjabi
